it possible to abstract away design patterns from biological systems and to apply them in distributed systems In other words, we do not wish to extract design patterns from software engineering practice, as it is normally done Instead, we wish to extract design ...

7 Design patterns - unipi.it

Design patterns in distributed systems Most design patterns assume that - Objects have a private state - Objects can communicate by invoking operations - Objects can exchange arbitrary data as parameters attached to such operations - Objects have their own control flow Either their own thread, or hijacking the control flow of the caller All these properties can be scaled up to units
